

Application Guidelines

Storage & Handling:

Do not freeze or store in direct sunlight. Do not store in temperatures above 80° F for extended periods of time.

Mixing & Application:

Envita SC is compatible with most pesticides when in solution with water. Mixing order should be as follows:

In-furrow Applications:

- 1) Add water to half of the application volume*
- 2) Add tank mix partners**
- 3) Shake bladder and add Envita SC as the last component
- 4) Agitate/circulate and apply as soon as possible
- 5) Apply with a minimum of 5 gpa total solution

*Envita SC is safe in chlorinated water up to 3.5 ppm

**Use low salt-index fertilizers (SI <20) for in-furrow applications

Foliar Applications:

- 1) Fill spray tank at least half-full of water*
- 2) Add tank mix partners following label recommendations
- 3) Shake bladder and add Envita SC as the last component**
- 4) Fill with water, agitate/circulate and apply as soon as possible
- 5) Apply with a minimum of 10 gpa total solution

*Envita SC is safe in chlorinated water up to 3.5 ppm

**If using Envita SC alone, use a non-ionic surfactant at a rate of 1 qt/100 gallons

Use rate: 0.8 fl. oz/acre

For use on multiple crops

In-furrow use: Apply directly to the seed, not 2x2.

Foliar application: Early Vegetative to Early Bloom - Refer to crop specific guidelines for primary application timings

Rain fast after 2 hours

Always follow tank mix partner application guidelines

Ideally tank mix pH should be between 4 and 7

Optimal application temperatures:

- Above 80% relative humidity: 50 - 90°F
- Below 80% relative humidity: 50 - 80°F

OMRI certified
