

## Systemic Season-long Nitrogen Fixation

Azotic's Envita® SC contains a food-grade bacteria that colonizes inside plant cells and fixes atmospheric nitrogen to enhance productivity.

### Fruit & Nuts

Includes apples, peaches, pears, cherries, plums, avocados, citrus, pineapple, grapes, almonds, pistachios, walnuts as well as others

### Features

- Soluble concentrated liquid
- Systemic colonization, multiplies inside the plant as it grows
- Forms a symbiotic relationship with the host plant to provide season-long activity
- Multiple application methods

Untreated shows less new growth

envita shows more new growth

### Functions & Benefits

- Nitrogen in the right place, at the right time
  - Enters plants quickly and fixes nitrogen directly in the plant cell; when and where it is needed
  - Fills the gap between available nitrogen and plant demand for nitrogen
- Fits your farm
  - Foliar or drip irrigation application methods
  - Low use rate, compatible with crop protection tank mixes partners
- Proven, consistent results
  - >4 years of global trial data on multiple crops
  - Positive yield response across a wide variety of crops

#### APPLICATION RATE

0.8 ounces/acre  
1 quart covers 40 acres

#### PACKAGING

4 x 1 qt/case  
Store in a cool dry place  
Do not freeze

## Envita Differentiators

- Naturally occurring bacteria
- Enters plants via the roots or leaves
- Lives inside the plant, including inside the plant cells, both below and above ground
- Not inhibited by nitrates
- Supported by scientific publications

## Drip Irrigation/Mirco Sprinklers

- Apply after leaf emergence/flush and 4 to 6 weeks later. Additional applications may prove valuable.
- Place water and Envita in the tank to cover the treated area
- Agitate or recirculate the tank to blend the water and Envita
- Pull from the water/Envita tank to effectively disperse in the field
- Can continue to irrigate after dispensing the water/Envita if needed

## Foliar

- Apply after leaf emergence/flush and 4 to 6 weeks later. Additional applications may prove valuable.
- Can be tank mixed with herbicides or pesticides
- Minimum of 15 gpa total volume ground applied
- Add Envita last, agitate and spray
- If water and Envita alone, add NIS

## What to Look for in Crop Response

- Darker green color
- Less nitrogen demand based on tissue analyses
  - Evaluate total or ammoniacal N rather than nitrate N
- Overall improved plant vigor
- Enhanced tree limb development
- Extended periods between irrigation needs
- Higher Brix measurement
- Increased yield
